2007 Record Year for Global Software

Company Continues Growth with New Customers, Technology and Strategic Alliances

OKLAHOMA CITY, Okla., January 24, 2008 – Global Software, a leading provider of public safety software solutions, completed the most successful year in its company history with the addition of 25 new customer sites, a licensing agreement for its Law Enforcement Records Management System (RMS) source code and a strategic partnership alliance.

Many law enforcement, fire and emergency medical services rely on Global Software's proven product offerings and commitment to customer service. With the addition of 25 new customers in 2007, there are now 120 installations serving over 700 agencies utilizing Global Software's applications for Computer Aided Dispatch, Records Management and Mobile Data.

Global Justice™, the latest addition to the company's product suite, played a major role in the company's success. Global Justice, an advanced multi-agency Records Management System for law enforcement, lets multiple departments manage both their data and users, giving each agency control over how their information is shared. The product is built on the Microsoft .NET Framework with an n-tier architecture for easy integration and expansion.

Innovative technology and complimentary development platforms were cited as factors in Tritech Software Systems decision to license Global's source code as the foundation for their records management product.

In addition, a strategic alliance was formed with PlantCML, a company providing mission-critical 9-1-1 emergency response and systems management solutions. This alliance enables PlantCML to offer Global Justice as a companion to their CADStar product for dispatch.

“We added a record number of new customers and many of them were in new market segments such as private security and state government, which should lead to even more growth in the future,” said Phil Sisk, president of Global Software. “A major topic in the industry has been the .Net Framework from Microsoft. While other companies talked about .Net, Global built and delivered .Net products to meet evolving customer needs. This new technology helped us build partnerships with some of the most respected and well known public safety vendors in the industry. All in all, it was a great year and we look to build on that success in 2008.”

About Global Software

Global Software is a leader in technology innovation in the public safety industry. Global provides solutions to Private Corporations as well as Federal, State and local Public Safety Agencies across America. Global has evolved its product suite to include integrated CAD, RMS, AVL, and mobile applications. A private-held company, Global Software maintains its headquarters and development center in Oklahoma City. For more information, visit www.globalsoftwarecorp.com.
